THE SCIENTIFIC METHOD

Steps to a theory

Can you put the different steps in the right order?

6	Theory	A hypothesis that stands up against all the tests							
	Test results	Is the hypothesis supported? If not, try a new one.							
	Test is repeated	To check if the results are consistent and accurate							
	Test	The prediction is checked by experiment and observations							
	Observation	A natural element is noted							
	Hypothesis	An "educated guess" at a possible explanation is given							

Find and explain the words!
